Dear Hiring Team,

I hope this letter finds you well. I am writing to express my sincere interest in the Software Engineer position at your organization, as advertised on your company website. I have attached my resume for your review, and I would like to draw your attention to additional content that provides a more comprehensive overview of my skills and experiences.

Portfolio Highlights:

- Face Recognition Project:** Developed a robust face recognition system incorporating machine learning and image processing techniques, showcasing my proficiency in AI.
- C# Projects:** Demonstrated my programming expertise through various C# projects, including desktop applications that highlight my attention to detail and commitment to delivering user-friendly solutions.
- Mobile Apps:** Contributed to the development of mobile applications, displaying adaptability and a keen understanding of the mobile development landscape.
- Python Programming:** Proficient in Python programming with experience in diverse projects, reflecting my versatility in handling different programming languages.
- Tumigo Computer Language:** I am developing a computer language in Python. This programming will solve the problems of tough paradigms.
- Tumigo Community:** This website is similar to YouTube, but it follows the modern design. An attractive UI implementing in Django and Python.
- Learning Management System:** A Django based website totally covers the learning aspects of courses, contents, will provide an online help to students to solve the paid-free contents.
- Snapspectra:** A Django based web api project to get an API from Unsplash site to fetch all the images and show up in my site with an attractive UI.

- **Online Vehicle Service Reservation System:** A Laravel project is developed for a client that is solving the issues of online booking systems as well as chat system between "Customer and Admin".
- **Kics - Kabeer Institute of Computer Science:** A ASP.NET based project in which it covers all the admissions of this institute. And Manage all the forms, courses, payments, staffs, students, and their issues at online system.
- **University Fees Automation System:** A PHP based University Fee Automation System is like a superhero for educational institutions, swooping in to rescue them from the chaos of manual fee management. Picture this: a webbased wonder that not only simplifies fee collection but also brings students and administrators together in perfect harmony. With its dual modules - one for the students and the other for the administrative heroes - it's designed to make life easier for everyone involved.
- **Laundry Management System:** A PHP/Laravel based project aims to simplify the laundry experience for users by offering a comprehensive website that connects them with various laundry service providers. In our fast-paced lives, managing laundry can be a hassle, and this platform seeks to streamline the process. The website will have two main panels, one for administrators and the other for users.
- **TumiTube:** A Django based project in which we are developing a Video Website like YouTube. Actually at this time, the Frontend is ready now.
- **Airline Management System:** A Django based system in which airline system will manage their assets, tickets, passengers, staffs with an attractive UI using tailwindcss, and SQLite.
- **Blog System:** A Django based blog project in which we create a blog with their links.
- **Noticed Board App:** A Flutter based android app in which we are dealing the notifications that is sent by super admin, admin, batch advisor, DOO, HOD, and many more users are involved. And then students will see their notifications by departments, and batches.
- **CryptoCrafter App:** The Flutter Android app for the trading platform will feature admin functionalities such as posting content with images, videos, voice messages, and file URLs, while users, both guests and logged-in, can search coins, view prices, and interact with content, including watching videos and downloading files.
- **eVoting System App:** The Flutter Android app in which we are dealing the online voting system of Pakistan. The attractive UI is implemented. The candidates are more and voter will can vote to any candidate for once.

Warm Regards,

Tariq Mehmood
